

Release Notes

Animator4 Version 1.2.0

October 6, 2009

GNS released a new version of Animator4. The new features include a presentation view and view dependent data handling.

The highlights of the new release are:

- added Platform IBM (PowerPC - AIX - 64Bit)
- added Presentation views and documents
 - automatic (command driven) and interactive generation and viewing of presentations
 - access to slot data from presentations
 - compatible with Evaluator
 - import of Evaluator session files and database (also export)
- view dependent (modifiable per view) data
 - cross sections
 - gridfunction bar
 - colors
 - video properties (size, position, glue, background in model views)
 - opt aux on/off, opt tit on/off
- support for Femzip5
- import & display of tensor results
- time marker labels for curves
- control of dialogs (also user defined) via command language
- more data accessible by name: slots, parts, images, etc. for better readability of session files

..... lots of further features and many bugfixes.

For further details and a complete list of bugfixes / improvements see the WhatsNew tab in the About dialog in Animator4 or review the file WhatsNew.text in the installation directory.
