

CDH/SPOT 4.4.5

Release Notes

**Advanced Engineering
CDH AG**

March 2013

System Requirements

Linux Operating System:

Red Hat Linux Version 5 or 6 (32bit or 64bit)

SUSE Linux Version 10 or 11

Windows:

Operating System: Windows (32bit or 64bit) XP or Version 7

Bug Fixes / Enhancements

- Error Corrections to the logic to print out property and material data to *.lw_fem file.
- Errors were reported when the --newgrid=2 is given in the command line, so that the variable mesh refinement option of the joint solid is activated. Especially, when --newgrid=2 is used with an option to suppress building the support region outside of the nugget solid (--NRsup=-1), extra property and/or material data were found in the output file.

Contact Information

For any technical problems associated with the CDH/SPOT program, please contact the local CDH office.
