

## Release Note

# Animator4 Version 2.4.2

October 29, 2019

GNS Animator4 Version 2.4.2 offers following new features and enhancements:

- Advanced weld drawing with up to five functions defining length, radius, color of top, bottom and shaft
- Curve property legend label: assign any text to a curve's legend label in a curve view without renaming the curve
- Important Change in Behavior: Editing the curve legend label in a curve view no longer renames the curve but sets the new curve property legend label! For details see description of command 'c2d lab'
- NVH FRF MPF: Provide control over the line style of the variants
- Modular data support for Tcl interface
- Python: New a4RbeElement class for rigid elements
- Dyna d3plot: - More support for reading geometry group files - added automatic pid function reading d3plot, depending on availability
- Pamcrash-ERF: Process single module data as non modular data
- Database4: Updated femunzip to 10.71. This fixes multi-threaded decompression
- and many more

For further details and a complete list of new features, improvements and bugfixes please refer to the WhatsNew tab in the About dialog in Animator4 or review the file WhatsNew.text in the installation directory.
