

## Release Note for CDH/SPOT version 4.5.2-C

May 2017

CDH/SPOT 4.5.2-C has introduced following corrections

- Bug fix for the incorrect MID and PID output found in the spotweld type of --newgrid=2 with the automatic support layer determination option evoked by parameter --NRsup=0. CDH/SPOT now creates correct material and property data in NASTRAN output files for different spotweld radii defined in the input file.

### Contact Information
